

BST Solutions

Solution 1:

Time Complexity : $O(n)$

Space Complexity: $O(n)$

```
import java.util.*;
```

```
class Solution{
```

```
    static class Node{
        int val;
        Node left, right;
    };
```

```
    static Node newNode(int item){
        Node temp = new Node();
        temp.val = item;
        temp.left = temp.right = null;
        return temp;
    }
```

```
    static int sum = 0;
```

```
    static int rangeSumBST(Node root, int low,
                                                                    int high){
```

```
        if (root == null)
            return 0;
```

```
        Queue<Node> q = new LinkedList<Node>();
        q.add(root);
```

```
        while (q.isEmpty() == false){
```

```
            Node curr = q.peek();
            q.remove();
            if (curr.val >= low &&
                curr.val <= high){
                sum += curr.val;
            }
        }
```

```

        if (curr.left != null &&
            curr.val > low) q.add(curr.left);
        if (curr.right != null &&
            curr.val < high)
            q.add(curr.right);
    }
    return sum;
}

static Node insert(Node node, int data){

    if (node == null)
        return newNode(data);
    if (data <= node.val)
        node.left = insert(node.left,
                           data);
    else
        node.right = insert(node.right,
                             data);
    return node;
}

public static void main(String[] args){

    Node root = null;
    root = insert(root, 10);
    insert(root, 5);
    insert(root, 15);
    insert(root, 3);
    insert(root, 7);
    insert(root, 18);

    int L = 7, R = 15;
    System.out.print(rangeSumBST(root, L, R));

}
}

```

Solution 2:

Time Complexity : $O(h)$

Space Complexity: $O(1)$

```
class Solution{
```

```

static int min_diff, min_diff_key; static class Node{
    int key;
    Node left, right;
};

static Node newnode(int key){
    Node node = new Node();
    node.key = key;
    node.left = node.right = null;
    return (node);
}

static void
maxDiffUtil(Node ptr, int
    k){ if (ptr == null)
        return ;

    if (ptr.key == k){
        min_diff_key = k;
        return;
    }

    if (min_diff > Math.abs(ptr.key - k)){
        min_diff = Math.abs(ptr.key - k);
        min_diff_key = ptr.key;
    }

    if (k < ptr.key)
        maxDiffUtil(ptr.left, k);
    else
        maxDiffUtil(ptr.right, k);
}

static int maxDiff(Node root, int k){
    min_diff = 999999999;
    min_diff_key = -1;
    maxDiffUtil(root, k);
    return min_diff_key;
}

```

```
public static void main(String args[]){
    Node root = newnode(9); root.left = newnode(4);
    root.right = newnode(17);
    root.left.left = newnode(3);
    root.left.right = newnode(6);
    root.left.right.left = newnode(5);
    root.left.right.right = newnode(7);
    root.right.right = newnode(22);
    root.right.right.left = newnode(20);
    int k = 18;
    System.out.println( maxDiff(root, k));

}
}
```

Solution 3 :

Time Complexity : $O(n)$

Space Complexity: $O(h)$

```
import java.io.*;
```

```
class Node {
    int data;
    Node left, right;
    Node(int x)
    {
        data = x;
        left = right = null;
    }
}
```

```
class Solution {

    static int count = 0;
    public static Node insert(Node
        root, int x) { if (root ==
        null)
        return new Node(x);
```

APNA
COLLEGE

parikshitmalik1@gmail.com

```

        if (x < root.data)
            root.left = insert(root.left, x);
        else if (x > root.data) root.right = insert(root.right, x);
        return root;
    }

    public static Node kthSmallest(Node root, int k){

        if (root == null)
            return null;

        Node left = kthSmallest(root.left, k);
        if (left != null)
            return left;
        count++;
        if (count == k)
            return root;
        return kthSmallest(root.right, k);
    }

    public static void printKthSmallest(Node root, int k){
        Node res = kthSmallest(root, k);
        if (res == null)
            System.out.println("There are less than k nodes in the BST");
        else
            System.out.println("K-th Smallest Element is " + res.data);
    }

    public static void main(String[] args){
        Node root = null;
        int keys[] = { 20, 8, 22, 4, 12, 10, 14 };
        for (int x : keys)
